Decorative

Polished Pewter

Decorative

Residential + Commercial

Polished Pewter is a distinctive decorative concrete finish that combines tinted epoxies, cementitious polymers and polyurethane. Prepared and installed by our skilled artisans, this premium finish involves over 19 intricate processes and is meticulously hand-crafted using advanced hand-trowelling and layering techniques.

No two floors are ever the same. Variations in the underlying concrete, light, pigment movement and application process create unique depth, texture and character, ensuring every *Polished Pewter* floor is a one-of-a-kind masterpiece.

Pietra Burnish

Decorative

Pietra Burnish is a refined decorative concrete finish created using a multi-layered cementitious overlay system, hand-trowelled on-site by our skilled artisans and protected with a premium sealer for lasting durability.

Subtle tonal variation and gentle movement create depth and character, while the seamless, low-lustre finish delivers a modern, understated and distinctly architectural aesthetic. As each floor is individually handcrafted, no two *Pietra Burnish* finishes are ever the same.

Micro- cemento

Commercial Only

Commercial

Microcemento is a premium hand-trowelled decorative concrete finish designed exclusively for commercial applications. Combining the timeless appeal of natural stone with exceptional durability, it features subtle movement and organic texture that add depth, character and sophistication to any space.

Suitable for both indoor and outdoor environments, **Microcemento** creates a seamless flow between areas while delivering outstanding performance. Built with a high-strength cementitious system and protected by a penetrating sealer, it offers a durable, low-maintenance surface with a refined, architectural aesthetic that stands the test of time.

Our Process

Every decorative overlay project begins with a client brief and on-site assessment to determine the most suitable solution. This is followed by detailed surface preparation and a tailored application process. We assess, repair and prepare the existing substrate before applying our specialised overlay systems to achieve a durable, high-quality finish.

This creates a seamless, durable finish designed to suit the space and its overall aesthetic. Each layer is carefully hand-applied to achieve depth, texture and a natural, refined feel. From soft minimalist finishes to bold architectural statements, our process is focused on delivering timeless decorative surfaces.

Typical Applications

- 🔧 Residential
- 🔧 Restaurants and Cafes
- 🔧 Retail
- 🔧 Showrooms
- 🔧 Office Spaces
- 🔧 Education Facilities
- 🔧 Commercial Spaces

Curing & Drying Times

Curing and drying times are indicative only and may vary depending on temperature, humidity, and site conditions. You can typically:

- Walk on the floor in clean socks within **24 hours**.
- Carefully move furniture back onto the floor **48 hours after completion of works**.
- Full cure times may vary depending on environmental conditions.
