Resurface

Urban Resurface

System

Residential + Commercial + Industrial

Urban Resurface projects begin with thorough preparation. We mechanically grind the existing concrete to remove anything that may affect adhesion and ensure the new system bonds correctly to the substrate.

Any minor required repairs are then completed before the resurfacing system is applied and sealed with a durable top coat for a long-lasting finish.

Typical Applications

- 🔧 Driveways & Pathways
- 🔧 Alfresco & Entertaining Areas
- 🔧 Pool Surrounds & Courtyards
- 🔧 Patios & Verandahs
- 🔧 Showrooms & Retail Spaces
- 🔧 Cafés & Hospitality Venues
- 🔧 Commercial Areas
- 🔧 Workshops & Utility Spaces

Urban Resurface

System

Why Choose Concrete Resurfacing?

Urban Resurface is a cost-effective way to transform existing concrete without the need for full demolition and replacement. Designed for residential and commercial spaces, the system delivers a modern, seamless finish while reducing disruption, mess, and downtime compared to removing and re-pouring concrete.

Our resurfacing systems are designed to improve both the appearance and functionality of tired or damaged concrete surfaces. Whether you're updating an outdoor entertaining area, driveway, pathway, or commercial space, Urban Resurface provides a durable, low-maintenance finish available in a range of colours and textures to suit the style of your project.

Urban Resurfacing Benefits

- Cost-effective alternative to replacing concrete.
- Modern, seamless finish.
- Suitable for residential and commercial spaces.
- Range of colours and texture finishes available.
- Can improve worn or aged concrete surfaces.
- Lower disruption compared to full concrete replacement.
- Durable and low-maintenance system.
- UV and weather-resistant sealing options available.
- Fast installation and curing times.
- Suitable for both indoor and outdoor applications.

We have a range of colours designed to complement most surfaces.

Our *Urban Resurface* system delivers a durable, hard-wearing finish while offering aesthetic flexibility through a range of colours, textures, and finish options.

DISCLAIMER: While every effort is made to ensure the colours shown on our promotional material are as accurate as possible, different monitors & devices produce and represent colour differently. For this reason, always check your colour choice either from samples/boards shown to you, or in our showroom.

Our Process

The existing concrete is mechanically prepared by grinding the surface to remove contamination, weak material, previous coatings, and anything that may affect adhesion, with any required repairs completed before application begins.

The resurfacing system is then applied using either a trowel or hopper spray method, depending on the selected finish and site requirements, before being sealed with a durable top coat available in both smooth and non-slip finishes.
